

ACCELERATING ANYTHING

- Minimum integration effort: unmodified workflows and tool chains, e. g. with FTP
- Flexible deployment on endpoints, on premise or as a cloud service
- One TIXway can serve several endpoints
- TIXway Universal accelerates various TCP-based applications
- TIXway-as-a-service: fully managed cloud service for faster FTP - no on-premise installations

ULTIMATE VELOCITY

- Maximum performance for file transfer of all content and sizes
- Enterprise features: check-sums, watch folders, resume, central management and more
- Infinity mode: real-time growing file transfer
- TIXstream Express: simple and fast file exchange for everyone
- TIXstream FX: easy to use web-based file exchange under your control

TIXEL offers unique lightweight solutions for high performance data transfer allowing you to easily get the most out of your IP network link - the Internet, private links, VPN, LAN, WAN, or via satellite.

TIXEL software is the key enabler for accelerating plain point-to-point transfers, cloud services as well as complex big data, B2B, and enterprise workflows.

Based on TIXEL's rock-solid acceleration engine, TIXstream and TIXway provide unmatched performance, reliability, full-speed encryption, standard interfaces and much more.

Your familiar applications – just faster

Data is transparently accelerated through gateways

ACCELERATING EXISTING NETWORK TOOLS

TIXway speeds up existing TCP-based applications like FTP on wide area links with maximum ease of deployment and use. Pure acceleration for familiar workflows and systems. One TIXway can accelerate and encrypt transfers for multiple clients or servers.

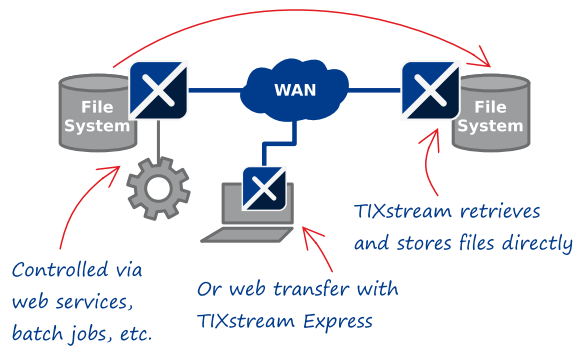

TIXway-as-a-Service enables FTP acceleration on the Internet as a unique fully managed service: no need for any additional software installations – neither on your nor on your customer's premises. Easily accelerate file exchange to instantly gain more speed and flexibility for your business.

TIXway Universal transparently accelerates sftp, scp, rsync, TSM, CIFS, NFS and other TCP-based applications, like remote backup and recovery, archiving and synchronization.

Solutions for professional file exchange

End-to-end file transfer

REPLACING LEGACY TRANSFER TOOLS

TIXstream offers secure and reliable enterprise-grade file transfer performance up to several Gigabits/s – maximum speed regardless of file size, content, or latency. TIXstream comes with lightweight interfaces for rapid integration.

TIXstream Express provides easy-to-use high-speed file transfer, either stand-alone or smoothly integrated into your favorite workflow system.

TIXstream FX is the turn-key solution for professional web-based file exchange. Ultimate simplicity enables spontaneous and nomadic use for everyone, anywhere on the Internet and within your private network.

USE CASES

- Central Storage** Access your Las Vegas' storage from New York City: distributed file systems accelerated with TIXway Universal.
- Remote Production** Exchange your files with maximum throughput – wherever they are now. Time-critical workflows enabled by TIXstream.
- Content Distribution** Easily share and market your assets world-wide – boosted by TIXway's acceleration.
- Nomadic Use** Facilitate your contribution process – collect media files at the touch of your fingertips with TIXstream FX.
- Global Contribution** Provide a shortcut directly to your FTP server. TIXway-as-a-service enables most efficient global file exchange for distributed work groups and B2B.
- Cloud Services** Boost performance of your data intensive cloud service with TIXEL – seamlessly integrated.
- Distributed Archives** Connect remote facilities just as if they were in your local data center. TIXway Universal accelerates various TCP-based applications.
- Remote Backup** Archive your assets at a safe location of your choice. Store and recover data at maximum speed with TIXway.
