

PRESS RELEASE

TIXEL supports FIMS demo at NAB 2011

Hannover (Germany), 2011-04-08

TIXEL became a member of the FIMS (Framework for Interoperable Media Service) project, a joint initiative by the Advance Media Workflow Association (AMWA) and the European Broadcast Union (EBU), in 2010 and is now proud to be official NAB 2011 FIMS demo supporter.

Moving data is one of the key issues in distributed media production, especially when it comes to large file sizes and long distances. TIXstream is one of the fastest and most robust file transfer engines for wide area IP networks. Beside pure transfer performance, seamless integration into workflow and management solutions is just as important. The FIMS initiative's goal is to standardize interfaces for a service oriented architecture (SOA).

"Being designed following SOA principles right from the beginning TIXstream is perfectly aligned with the FIMS objectives. Creating appropriate interfaces for the TIXstream transfer engine is straight forward." says Andreas Aust, TIXEL's CTO. "FIMS provides the perfect environment for the customer to benefit from TIXstream's capabilities, letting us focus on our core competences – mastering the end-to-end chain of high performance file-transfer." With FIMS standardized services the customer can choose from a variety of components best in line with his workflow needs.

Andreas Aust talks about "Multi-Gigabit WAN File Transfer: Accelerating Production Workflows in FIMS based SOA Infrastructures" during the FIMS demo sessions at NAB 2011, FIMS/AMWA/EBU booth N3134.

About TIXEL GmbH

TIXEL is a technology driven company located in Hannover, Germany. TIXEL provides solutions for accelerated WAN file transfer over wide area IP networks. TIXEL's patented TIXstream technology includes the Reliable WAN Transfer Protocol and a high performance software framework for moving bulk data at highest speeds. TIXEL serves high end customers e. g. in media & entertainment and research.
